Atrial fibrillation checklist

Working together to provide information, support and access to established, new or innovative treatments for atrial fibrillation

Atrial fibrillation checklist

This checklist is designed to provide your doctor or specialist with information they can use to choose the best treatment for you if you have been diagnosed with atrial fibrillation.

Atrial fibrillation and atrial flutter are common heart rhythm disturbances which may result in complications such as heart failure (sluggish beating of the heart) or sometimes stroke. Symptoms include palpitations, breathlessness, chest pain and tiredness.

There are many different and important treatments for atrial fibrillation and atrial flutter which are very effective; preventing the symptoms and the complications of the condition. The right choice of treatment depends in part on accurate information from the patient.

This checklist is intended to help provide that important information to your doctor. It would be useful to complete the form prior to visiting your doctor. Do not worry if there are any technical terms you do not understand – just put a question mark.
